Practical Solutions for Persistent, Everyday Problems

Yair Assaf, Bohak Plating Company, Holon, Israel

Through the use of visual illustrations, this presentation will show many ways of solving practical problems and improving methods in the shop and lab in the course of everyday work. Improvements can be built into the shop that will save time and money. Solutions that will be discussed in detail include how to have better current distribution in plating jigs, and how-and-why to build small barrels inside larger ones.
